PROCESSING GUIDELINES

Storage & Handling	Printing	Reflow (See Fig. 1)	Cleaning
<p>1. Refrigerate to guarantee stability @ 0 to 10 °C (32 to 50 °F). When stored under these conditions, the shelf life of OM-353 is 6 months.</p> <p>2. Paste can be stored for 2 weeks at room temperature up to 25 °C (77 °F) prior to use</p> <p>3. When refrigerated, warm up paste container to room temperature for up to 4 hours. Paste must be 19 °C (66 °F) before processing. Verify paste temperature with a thermometer to ensure paste is at 19 °C (66 °F) or greater before set up of printer.</p> <p>4. Paste can be manually stirred before use. A rotating/Centrifugal force mixing operation is not required. If a rotating/centrifugal force mixing is used, 30 to 60 seconds at 300 RPM is adequate.</p> <p>5. Do not remove worked paste from stencil and mix with unused paste in jar. This will alter the rheology of unused paste.</p>	<p><u>STENCIL</u>: Recommend ALPHA CUT, ALPHA NICKEL-CUT, ALPHA TETRABOND, or ALPHA FORM stencils @ 0.100 mm to 0.150 mm (4 to 6 mil) thick for 0.4 to 0.5 mm (0.016 inch or 0.020 inch) pitch. Stencil design is subject to many process variables. Contact your local Alpha Sales Rep for advice.</p> <p><u>SQUEEGEE</u>: Metal (recommended)</p> <p><u>PRESSURE</u>: 0.21 to 0.36 kg/cm of blade (1.25 to 2.0 lbs/inch)</p> <p><u>SPEED</u>: 25 to 150 mm per second (1 to 6 inches per second).</p> <p><u>PASTE ROLL</u>: 1.5 to 2.0 cm diameter and make additions when roll reaches 1cm (0.4 inch) diameter (min.). Max. roll size will depend upon blade.</p> <p><u>STENCIL RELEASE SPEED</u>: 1 to 5 mm/sec.</p> <p><u>LIFT HEIGHT</u>: 8 to 14 mm (0.31 to 0.55 inch)</p>	<p><u>ATMOSPHERE</u>: Clean-dry air or nitrogen atmosphere.</p> <p><u>PROFILE</u>: Soak: 155 to 175 °C, 60 to 100 sec soak profiles have been determined to give optimal results, please see profile chart, ALPHA OM-353 SAC305/SACX Plus 0307 Typical Reflow Profile. If required, good results are also achievable with high soak temperature profiles of 170 to 180 °C for 60 to 120 sec, especially in N₂. Typical peak temperature is 235 to 245 °C.</p> <p><u>NOTE 2</u>: Keeping the peak temperature below 241 °C may reduce the number and size of BGA and QFN voids.</p> <p><u>NOTE 3</u>: Refer to component and board supplier data for thermal properties at elevated temperatures. Lower peak temperatures require longer TAL for improved joint cosmetics.</p>	<p>ALPHA OM-353 residue is designed to remain on the board after reflow. If reflowed residue cleaning is required, Vigon A201 (in line cleaning), Vigon A 250 (Batch Cleaning) or Vigon US (Ultrasonic Cleaning) are recommended. Vigon is a registered trademark of Zestron.</p> <p>Misprints and stencil cleaning may be done with IPA, ALPHA SM-110E & ALPHA SM-440.</p>

These are starting recommendations and all process settings should be reviewed independently.
